# AC Spark Box Instrumentation

You will need:

- Spark Box
- Extension Cord

Hooking Up Box

1) Connect ground wire from the right side of the box to spark plug ground. The closer it is to the plug the better, although stand chassis will work.

2) Connect spark plug cable from Coil output to Spark Plug.

3) Plug DO cable into Zucrow DO, keep it turned off for now.

4) Connect all three wall outlet connectors to the extension cord, no spark should be active at this time.

5) To turn on the spark, set DO high, you are now producing a 40kV spark!
    a) The spark should be an audible buzzing sound
